

# Kmati Accelerator for Efficient Migration

## Migration Challenges

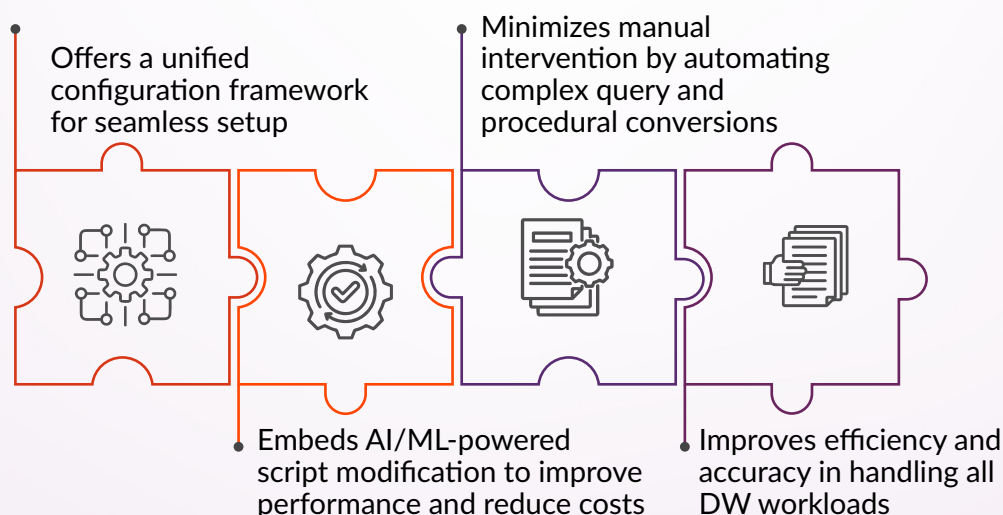

Databricks delivers clear advantages over legacy and cloud-based data warehouse platforms. However, organizations often find the migration process complex, expensive, and time-consuming. Databricks introduced **Lakebridge** to automate portions of the migration journey from major data warehouse platforms.

While Lakebridge streamlines certain steps, it still leaves key gaps:

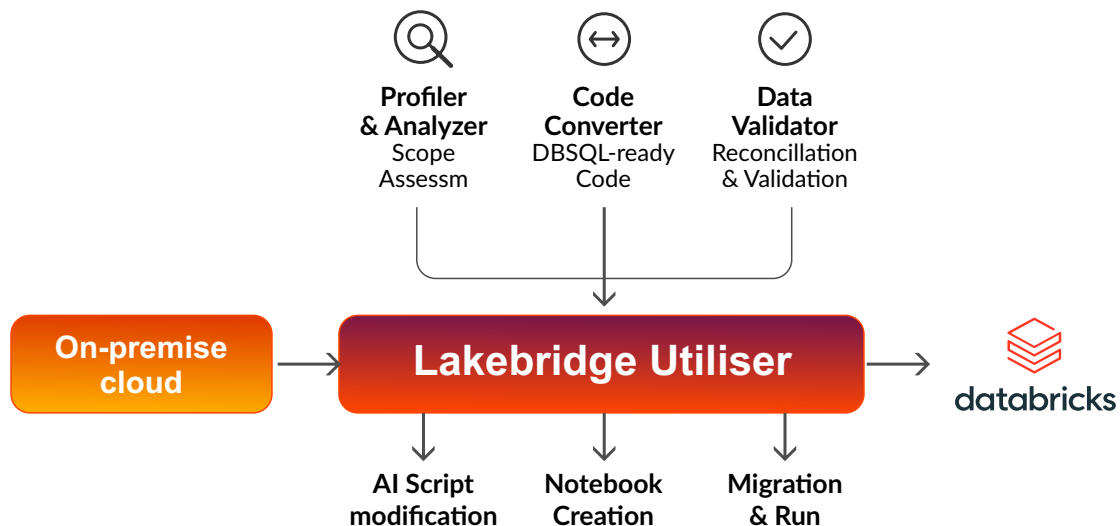

## Opportunity for Improvement

These limitations create an opportunity to deliver an enhanced migration accelerator that:

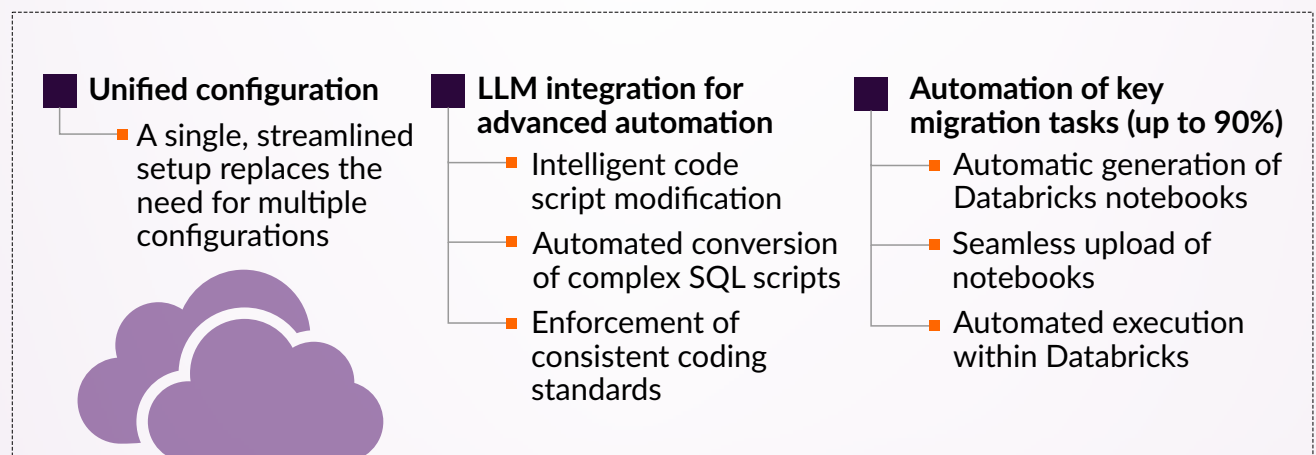

By addressing these gaps, organizations can achieve faster, more reliable, and cost-effective migrations into Databricks – maximizing the platform’s full potential.

## Kmati Accelerator for efficient Migration

Kushagramati Analytics has developed a solution - Kmati Accelerator that effectively addresses the limitations outlined above through the following enhancements:

By integrating seamlessly with Lakebridge, Kmati Accelerator is designed to further reduce migration costs by up to **25%** and shorten migration timelines by approximately **40%**, enabling organizations to transition to Databricks more efficiently and cost-effectively.
