

Platform Tuning - In a nut shell

- Cloud platforms, like machinery, require regular tuning for peak efficiency.
- Growth in data size increases cost and performance challenges.
- Quarterly tuning ensures cost-efficiency and consistent high performance.
- Key elements for optimization:
 - Platform Observability Tool** – Monitors Databricks activities, provides insights, and enables cost control.
 - Experienced Tuning Team** – Diagnoses issues and optimizes platform performance.

Need for Platform Tuning

Our Solution

- Unity Catalog:** Logs platform activities in real-time, enables cost audits, and provides custom dashboards.
- Databricks Overwatch:** Multi-cloud tool with pre-built and custom dashboards for deeper insights.
- Combined Usage:** Using both solutions ensures comprehensive monitoring, cost management, and reporting.

Our Expertise

Client Use Cases

- Kushagramati is a **Global Implementation & Support Partner** for Databricks since 2021.
- Extends **Databricks Overwatch** with advanced dashboards.
- Optimizes platforms for **Fortune 500** companies.
- Develops **custom dashboards & alerts** for governance and efficiency.

- Goods Manufacturer Company:** Saved **\$100K/year** by identify & filter the genuinely needed to be real time.
- AT&T:** Improved cluster utilization, tuning workloads for **1.5x performance**.
- Global Manufacturing & Consumer Goods:** Increased workspace efficiency by **30%** through job compliance analysis.
- Travelers Job Compliance:** Identified tuning opportunities, reducing runtime and operational expenses.
